

Athletio: Data Driven Fitness Application

Md. Tanvir Alam (Student, University of Dhaka), Mashrur Rashik (Student, University of Dhaka), Kashob Kumar Roy (Student, University of Dhaka)
Supervisor: Md Mofijul Islam (Lecturer, University of Dhaka)

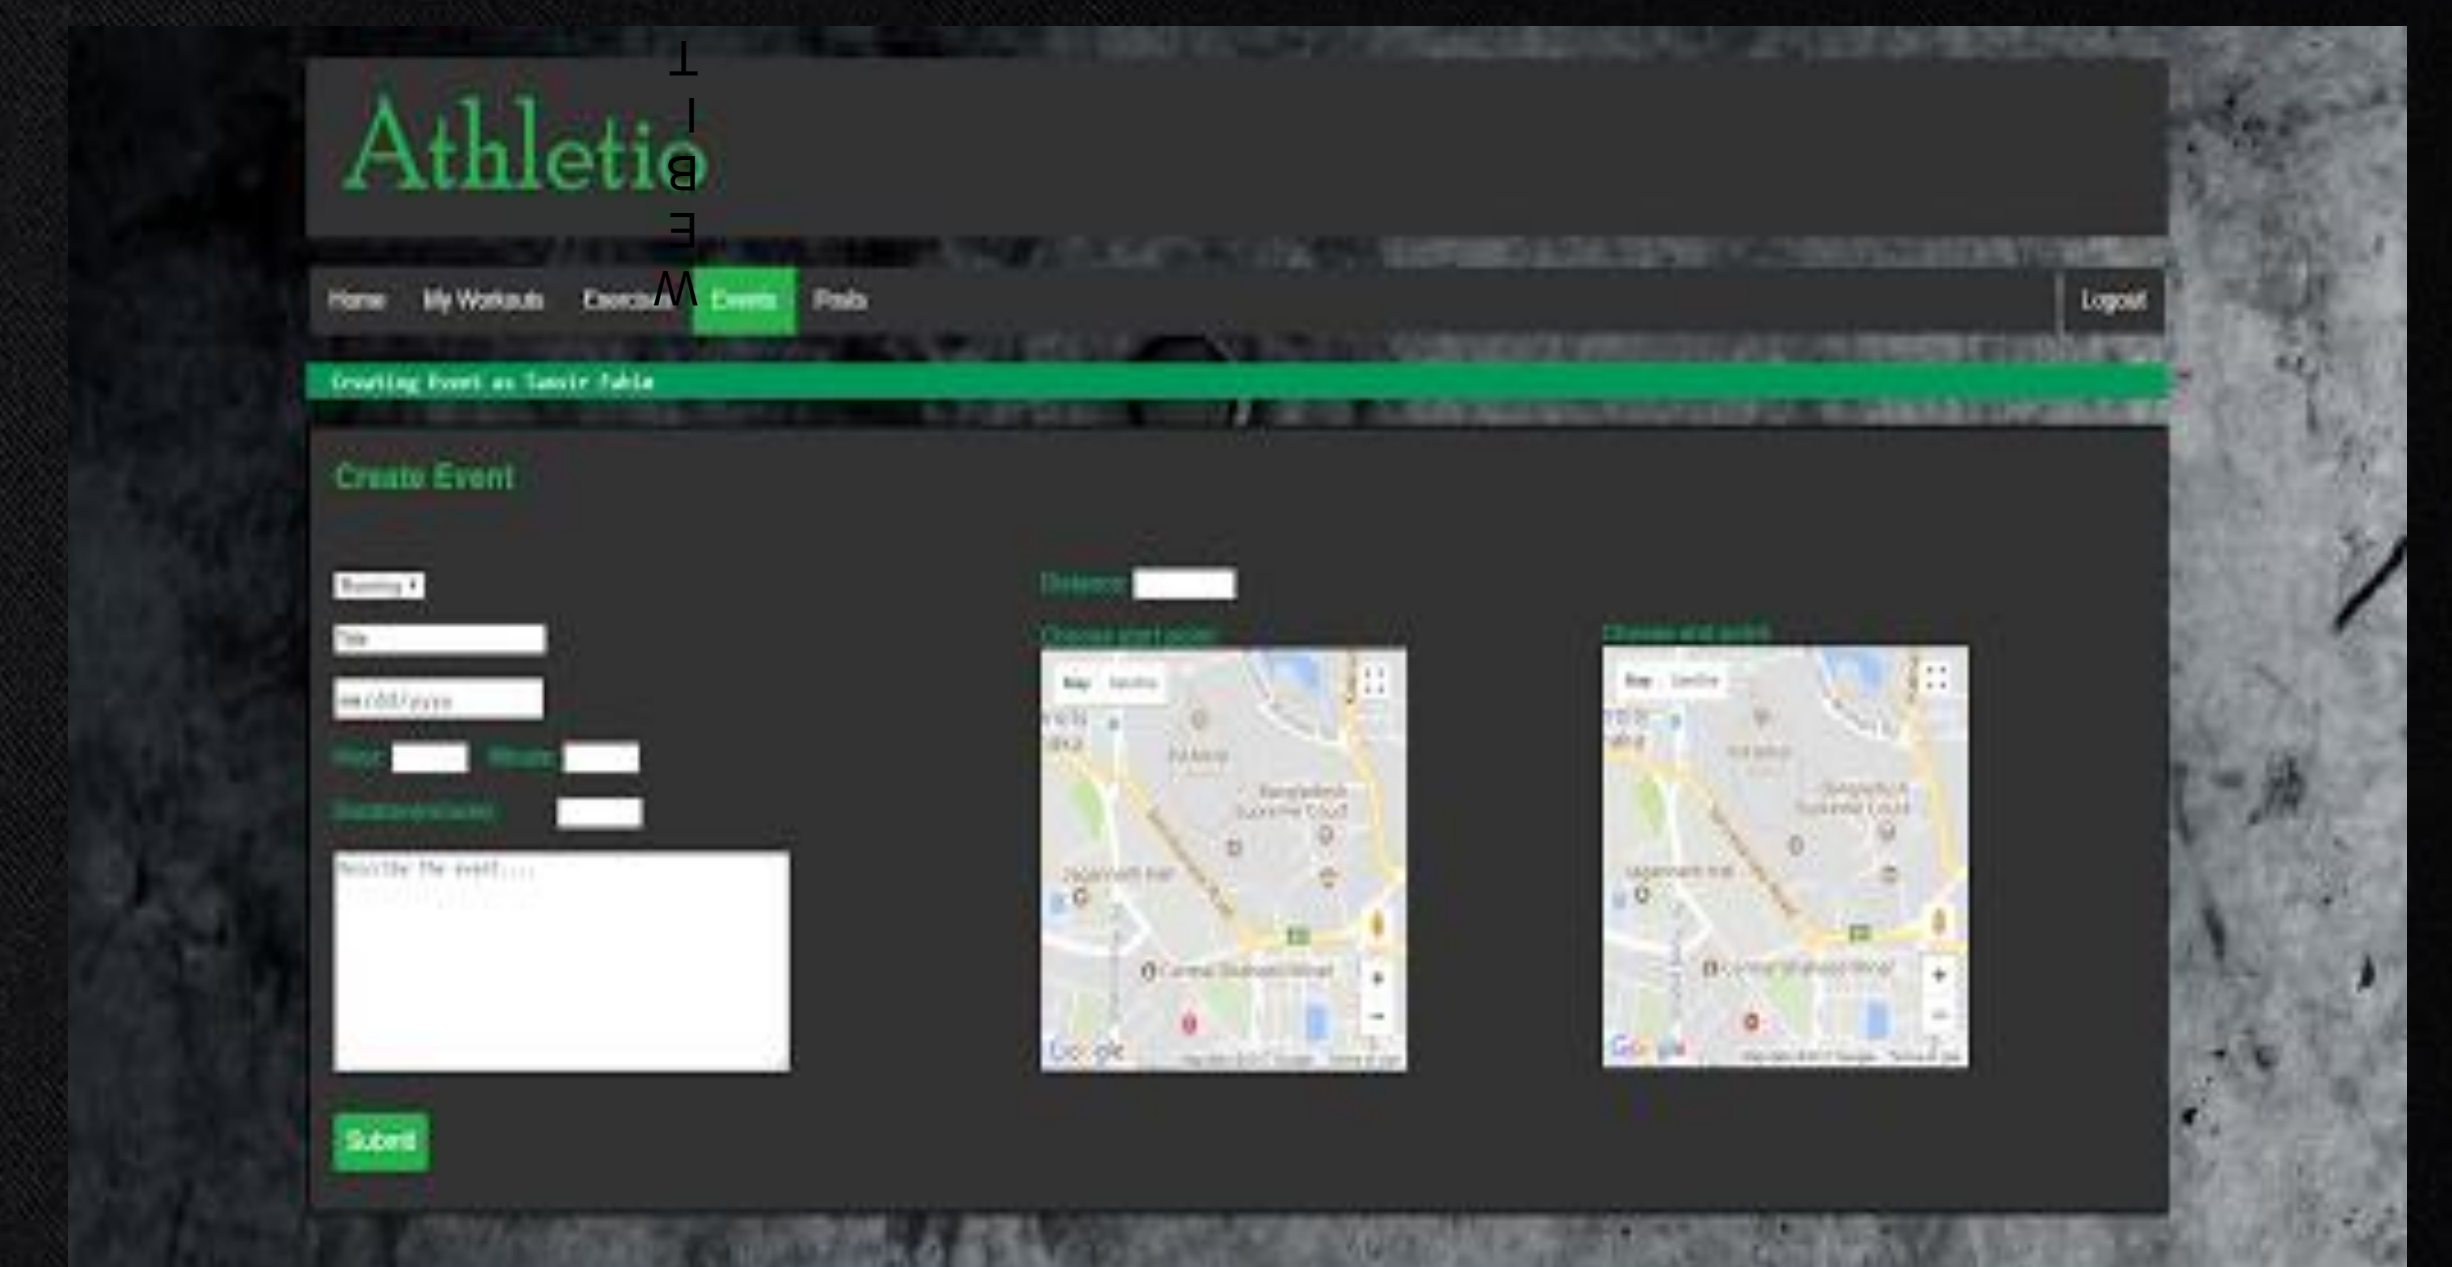

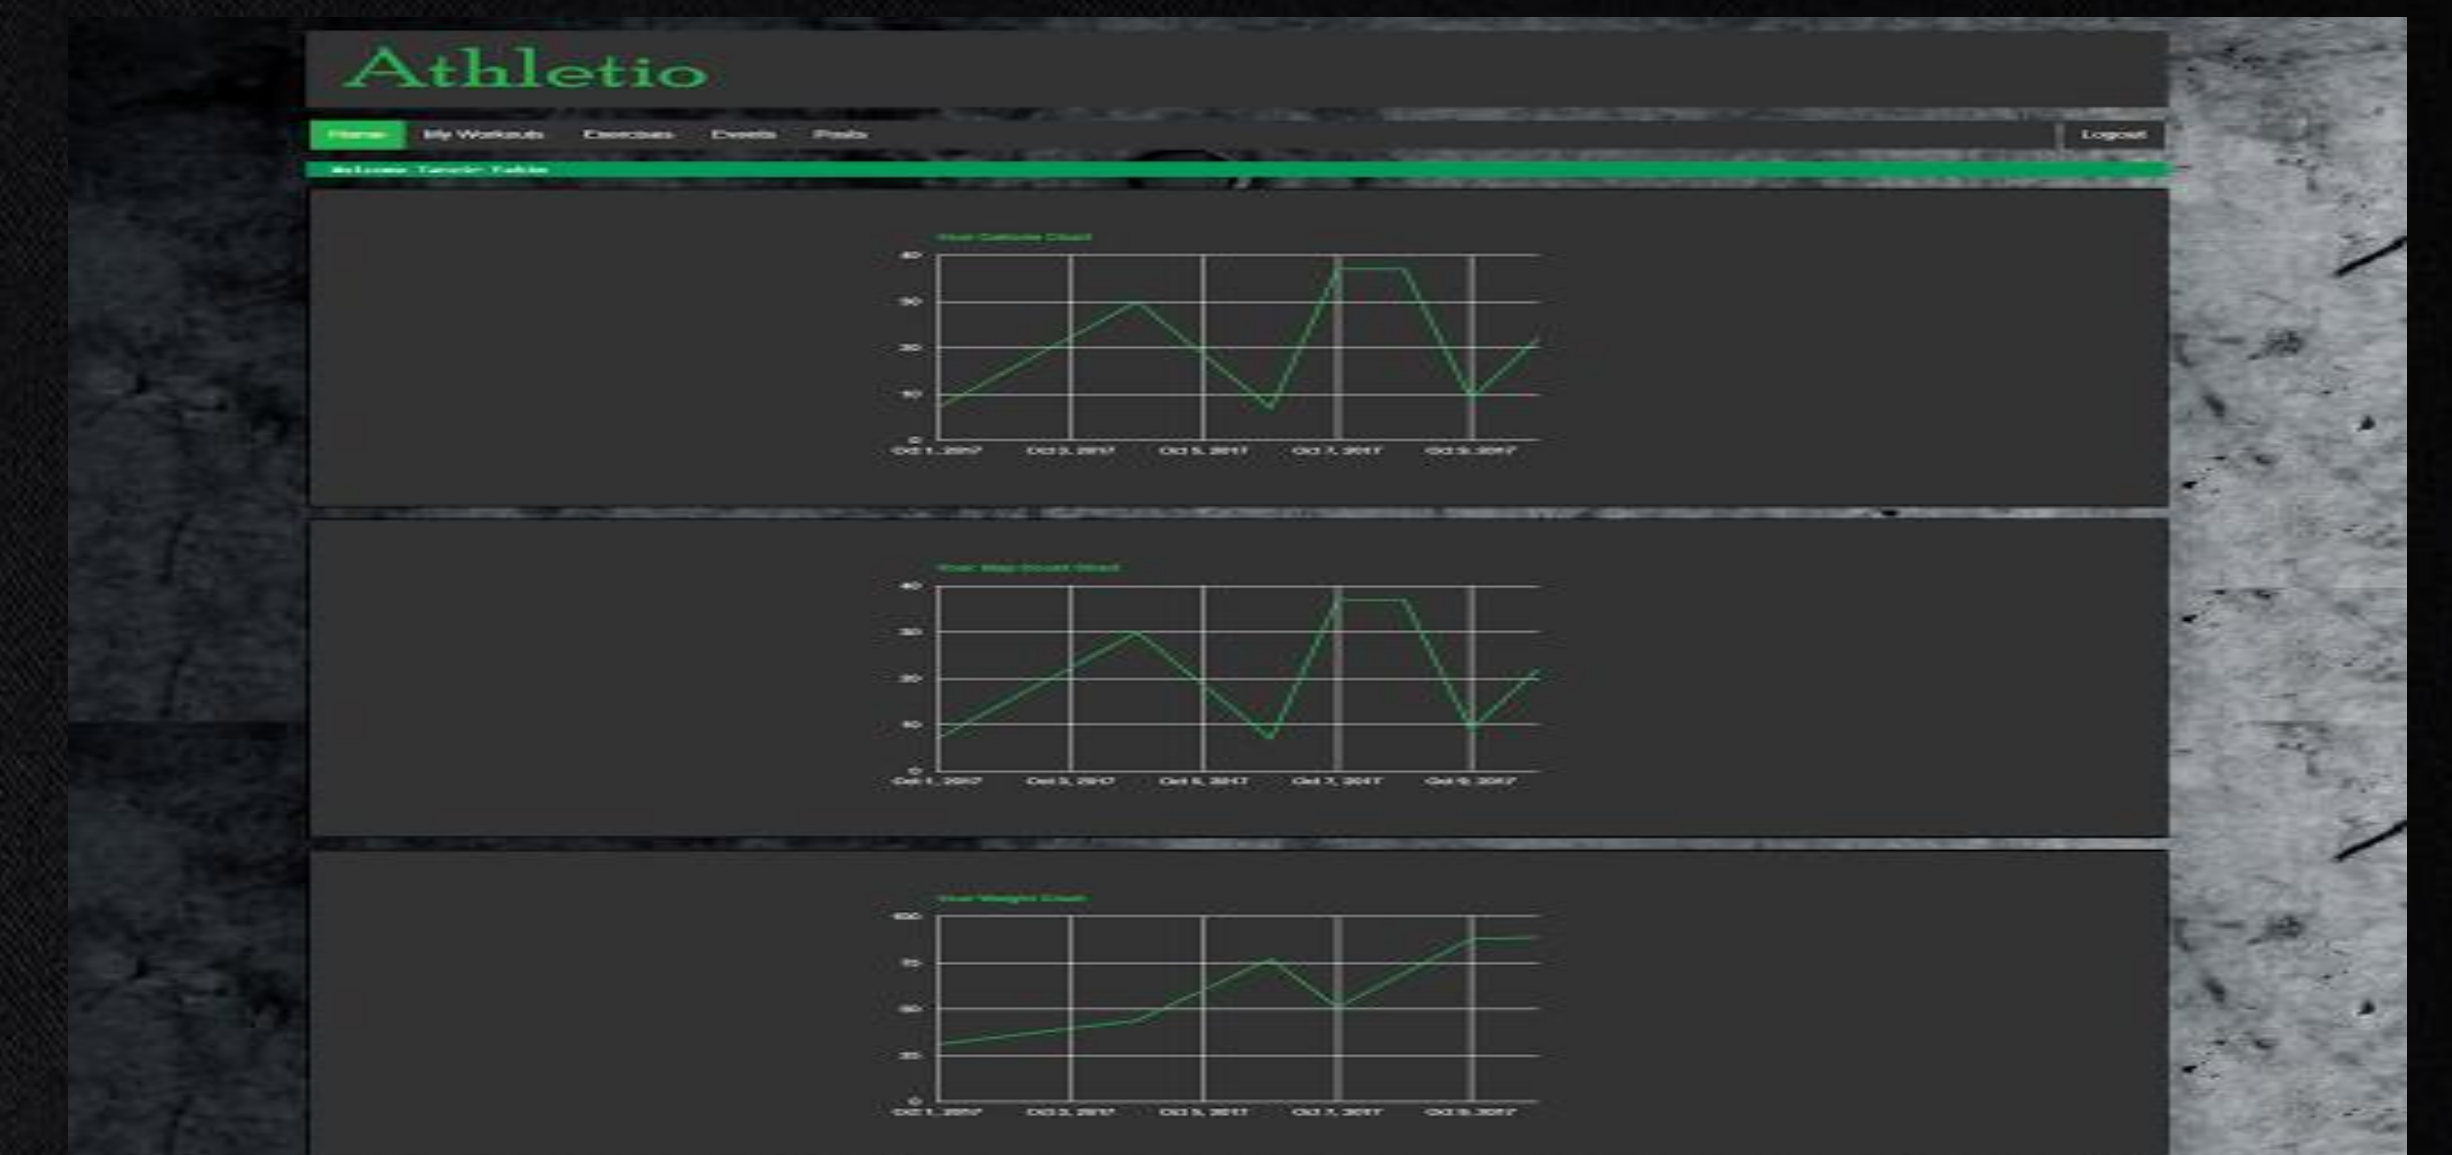

Abstract

- The app tracks information of users, e.g. step count, and creates a fitness leaderboard.
- Athletio also provides a virtual reality treadmill feature that creates real life environment while running on a treadmill.
- A chatbot for fitness queries based on personal health information.
- It also allows to share events, progress photo with others and track workouts like running and walking.

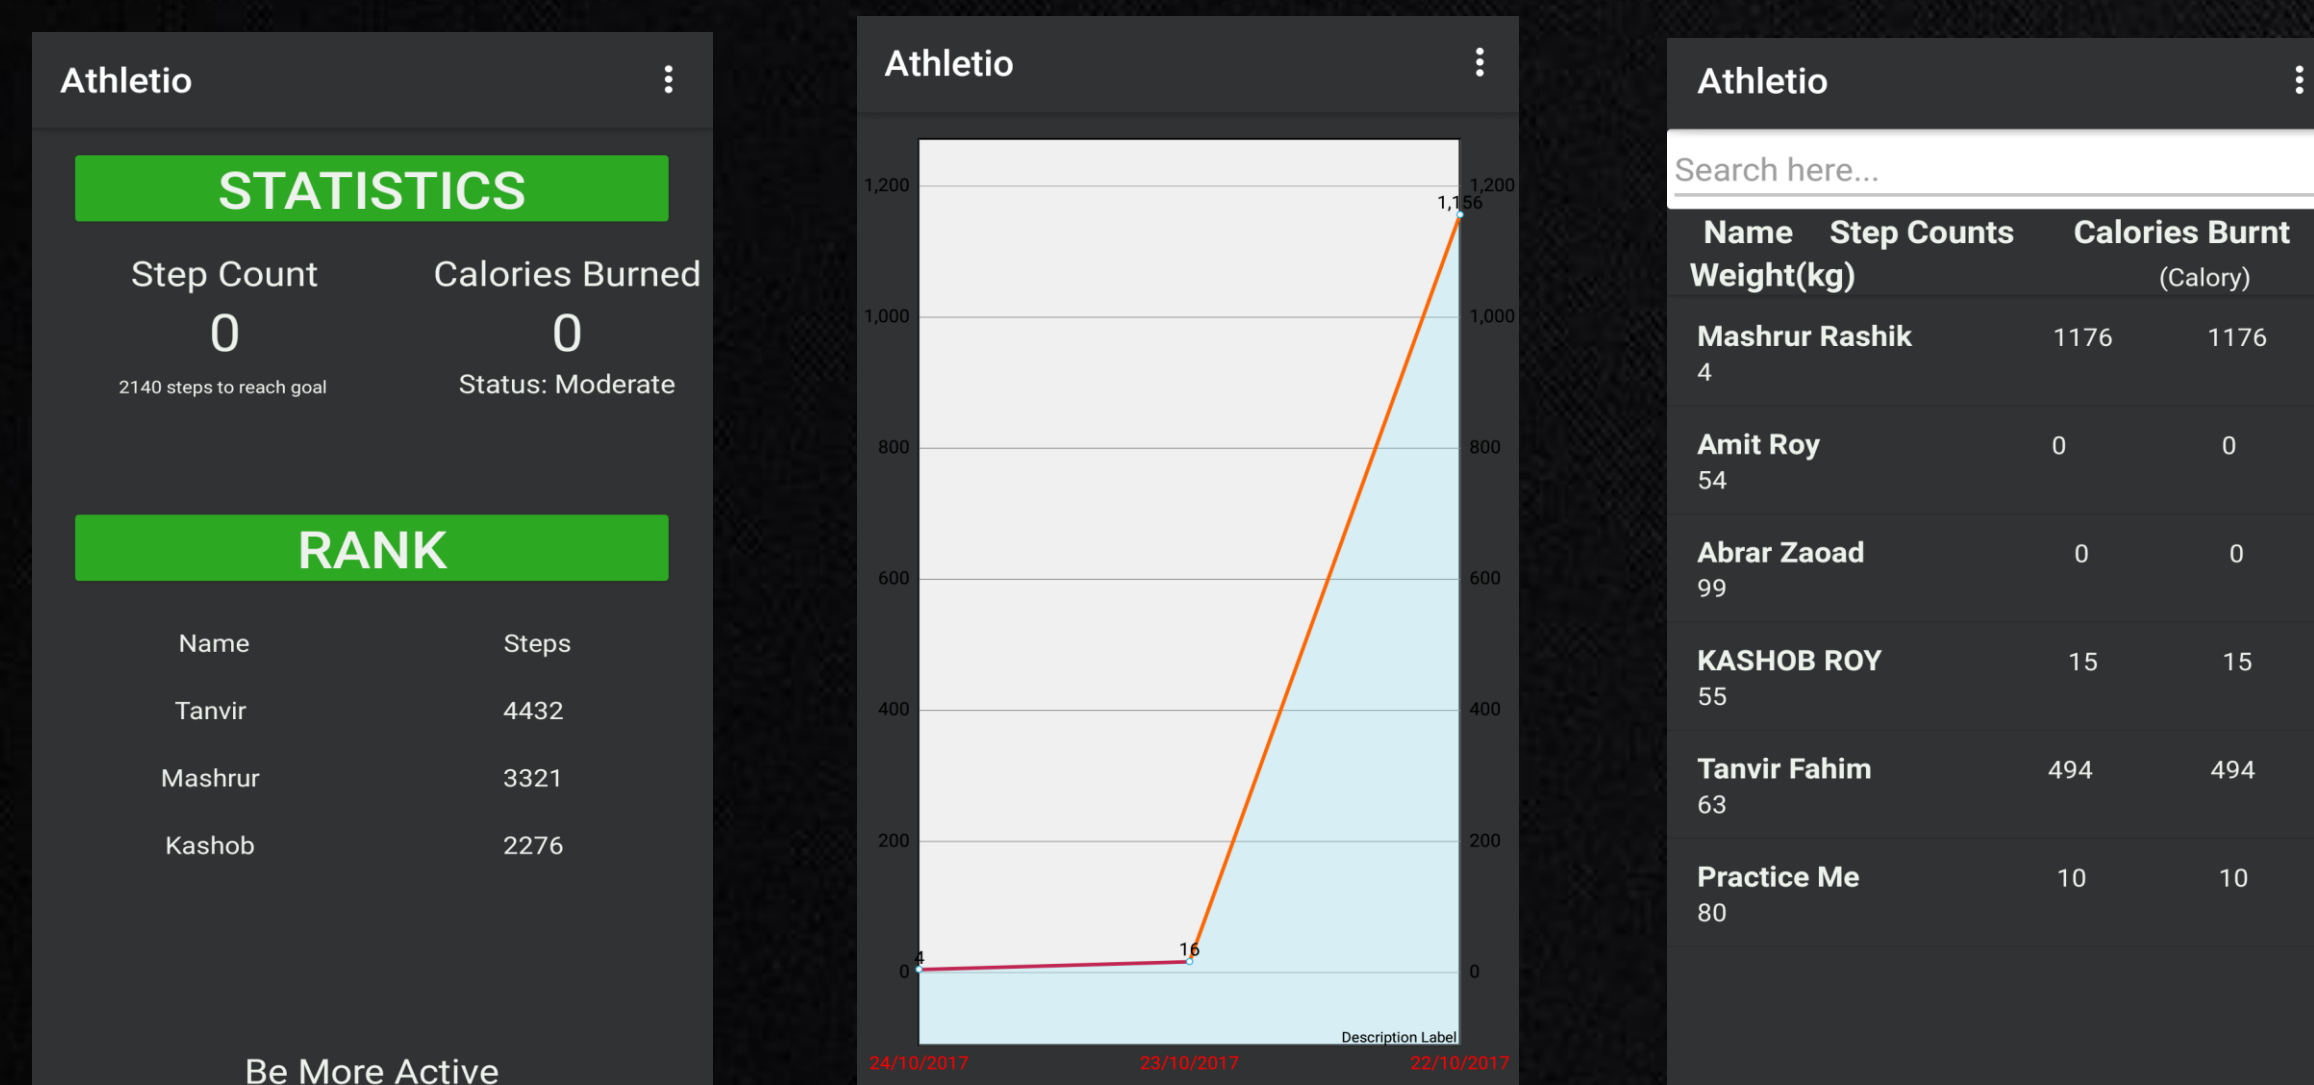

Objectives

- Our goal is to motivate people to be more active physically.
- Through our app users will share their workouts and progresses with friends.
- This kind of sharing and the leaderboard according to the tracked data will create a competitive mindset among users and motivate them to be more active.
- Give more insight on user personal fitness information
- Create a social fitness network.

Web App: Fitness Information Dashboard

Interactive Fitness Data Visualizer

Virtual Reality Based Treadmill Workout

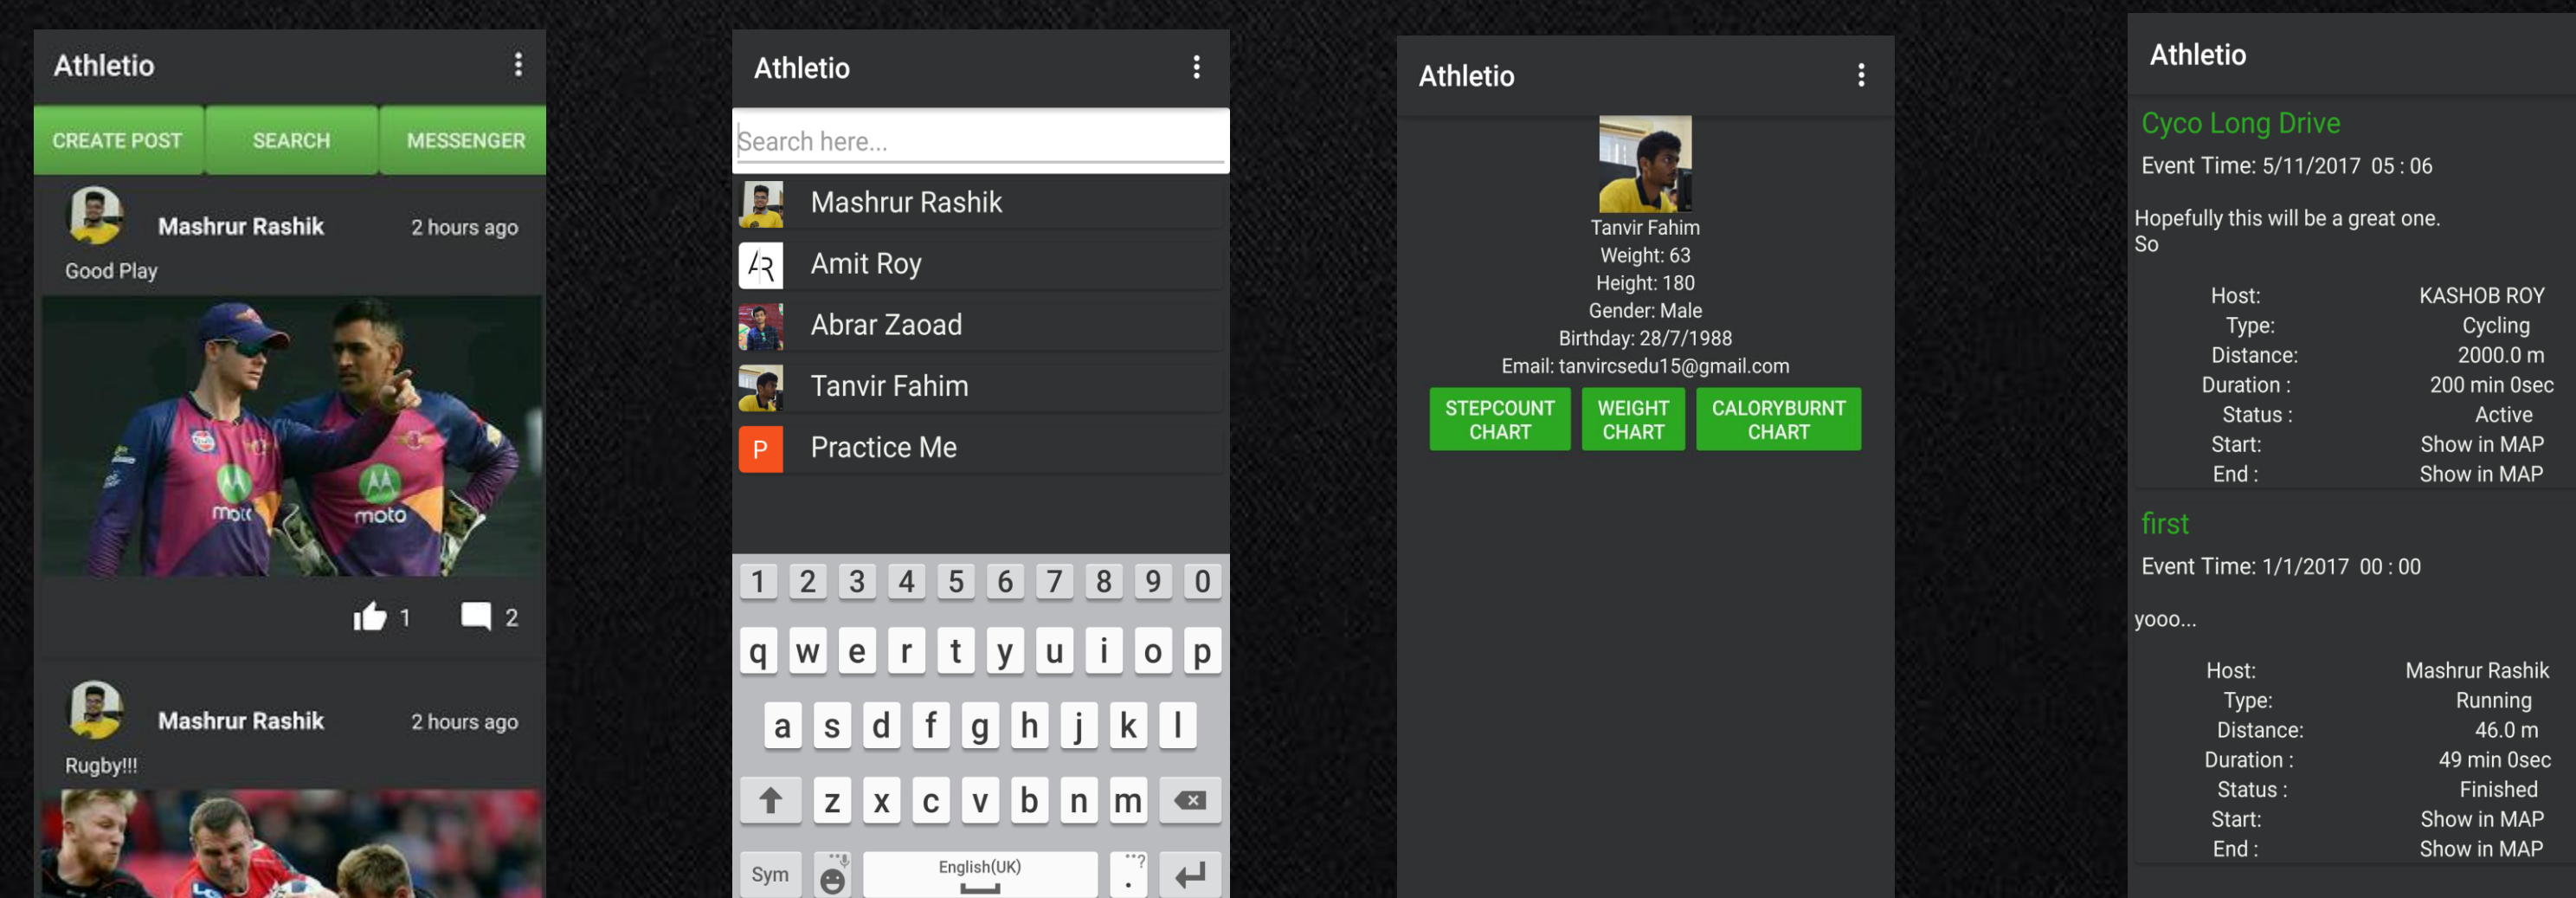

Future Plan

- We plan on working on the Chatbot by training it with more data.
- We also plan on improving our social feed.

Personalized Fitness Bot

The bot can help user to get more insight about their fitness information.

Social Fitness Network
